1) Frontend = (HTML , CSS , JAVASCRIPT)

2) BACKEND = (C# , .Net Framework , .Net MVC , .n
API , .Net Core ,)

3) Database = SQL server , Mysql Server

Visual Studio 2022 , (IDE) – Integrated development Environment .

Today Topic

2) Class = Class is a blueprint or a template which is store all member of the program like variable , method constructor , indexer , property , etc .

Class is a container which contains all members of the programs .

```
using System;                          //  namespace is a refrence

namespace Azam2ndDay
{
   internal class Students
   {
      static void Main(string[] args)
      {

         int a = 10;

         int b = 20;

         int c = (a + b);

         int d = (a - b);
```

```
            int f = (a / b);

                                                    //print
            Console.WriteLine(c);
            Console.WriteLine(d);
            Console.WriteLine(e);
            Console.WriteLine(f);

            Console.WriteLine("Azam");
            Console.ReadLine();

        }
    }
}
```
